13. Course Description

Data Science is the study of the discovery of knowledge from data. Being a data scientist requires an integrated skill set spanning mathematics, statistics, machine learning, databases, and other branches of computer science along with a good understanding of the craft of problem solving. Data Engineering is the study of how to engineer or process data, i.e., data cleansing, data storing, etc. There are three main parts in this course:

- Data engineering: Data exploration & preparation
- Data analysis: Machine Learning techniques
- Data visualization: Storytelling via data
